

## Care instructions Roller Fabrics

The Lienesch roller fabrics are easy to clean. The roller fabric can simply be swung in appr. 30°C warm fine, non-synthetic detergent lye.

Rinse the fabric well. After cleaning the blind has to be hanged moist and to be dried opened. Do not iron the blind!

***Metalized fabrics are not washable, as well as black-out coated and burn-out fabrics.*** These fabrics can be cleaned carefully with a moist cloth. Do not rub! Basically Lienesch recommends cleaning by an appropriate specialist. More information, see [www.vds-sonnenschutz.de](http://www.vds-sonnenschutz.de) (organisation of German sun protection cleaners).

Beware! Avoid that for motorised and handle operated blinds, the mechanical parts do not make contact with water or fluids.

Please also take note off all assembly and manuals given by the supplier of the blind systems.

***Please note:***

Do not clean the windows with any chemical products, which can make direct or indirect contact with the blind. In case of less ventilation condensation spots can arise.

We do not take any responsibility for fabric damages caused by cleaning material or insect excrements.

Lienesch pleated fabrics are not meant for outdoor use. Because of this, we cannot give any guarantee on the fabric when these will be placed in a open or partly glassed roof.

***Responsibility:***

Above mentioned instructions have been drawn up with the utmost care. Nevertheless Lienesch bv cannot accept any responsibility for cleaning results.
